### **High field transport in semiconductors The drifted**

They are averaged exactly over the drifted Maxwellian distribution function, from which the high field transport characteristics of semiconductors can be calculated. The formulae are expressed in terms of a generalised band structure, and the effect of the mixing of Bloch states with spin-reversal scattering is included.

The high field limit for the semiconductor Boltzmann equation with Pauli exclusion terms is investigated. The limit problem is shown to have a unique solution for every given density. The proof relies on a linearization procedure together with a continuation argument. The density is finally proven to converge in the high field limit towards the solution of a nonlinear hyperbolic equation.

### **High field transport in semiconductors by transmission**

3 Conclusion The high-field transport in the semiconductor is analyzed with the use of the transmission formalism. The one-dimensional BTE is directly solved without resorting to RTA and the perturbation expansion in the powers of electric field. The analysis is intended for a finite system with the length  $L$ , in contrast to the conventional approach of Drude model. In case only the elastic
