Excitation magnetic Wikipedia

Brushless excitation. Brushless excitation creates the magnetic flux on the rotor of electrical machines without the need of carbon brushes. It is typically used for reducing the regular maintenance costs and to reduce the risk of brush-fire. It was developed in the 1950s, as a result of the advances in high-power semiconductor devices.

What is the difference between separately excited and self

Self Excited: In these machines, instead of a separate voltage source, the field winding is connected across the main voltage terminals. Separately Excited: In this type of Excitation field winding is excited through a separated DC source. With the help of Separate DC source field winding are energized and produces the magnetic flux.
